

Carbon Change-Out Services

We save you time and money. Using state-of-the-art vacuum equipment, our change-out services are fast and efficient, which reduces your down time and saves you money. To further serve our customers, IMT has joined with Carbon Service and Equipment Company, a division of Encotech, Inc., to provide carbon and multi-media change out services.

- On-site hazardous and non-hazardous spent carbon and multi-media change-out services.
- State-of-the-art vacuum equipment allows for optimal efficiency during change-out, saving you time and money.
- Thermal reactivation eliminates hassles associated with solid waste disposal.
- Experienced technicians are 40-hour OSHA and LPS trained.

As companies become concerned with “cradle-to-grave” responsibility for potential environmental pollutants, our ability to ensure contaminant destruction through thermal reactivation of spent activated carbon eliminates the hassles and risks associated with solid waste disposal.

Spent carbon can be sent to reactivation facilities where a Certificate of Reactivation can be issued for each shipment. This certifies that the spent carbon has been recycled in a manner that meets or exceeds all applicable regulations.

Providing Reliable Equipment Backed by Responsive Service.
