

Training Services

Knowledge is the key to success. IMT has captured our extensive equipment operations & maintenance and remedial progress monitoring experience into training programs that will teach your technicians and project managers the techniques to succeed on your remediation projects. Beyond giving you the know-how to add years of life to your equipment, we will also show you the secrets to optimizing vapor, liquid, and contaminant recovery rates which is key to achieving your remedial goals.

Our training programs are conducted by the engineers who design our equipment, as well as experienced technicians who have conducted O&M and monitoring at remediation sites across the United States.

Topics include:

- Dual-Phase Vacuum Extraction (DPVE) Systems
- Soil Vapor Extraction (SVE) Systems
- Air Sparging Systems
- Ozone Injection Systems
- Free Product Recovery Systems
- Air Strippers
- Oil/Water Separators
- Liquid and Vapor Carbon Vessels
- Bag Filters
- Lead Treatment Systems
- Thermal and Catalytic Oxidizers
- Control Panels
- Telemetry Systems

IMT team understands what it takes to maintain and monitor equipment that can handle the rigors of soil and groundwater remediation because we have hundreds of remediation products in operation today.

Providing Reliable Equipment Backed by Responsive Service.
